Standalone replication of the Event Evaluation	2
Standalone replication of the PCA	27

STANDALONE REPLICATION OF EVENT EVALUATION

- EXAMPLE 1 -

In a Linux server with Apache, R, PHP, and MySQL installed, this standalone syntax procedure assumes that there is a MySQL account with the following user data:

MYSQL	User: user
	Password: passuser

For this user, this standalone syntax procedure assumes there is a database with the following structure:

MYSQL	Database: event_db
-------	--------------------

In order to replicate the Event Evaluation analysis example there are 7 important files (quest1.php, quest2.php, quest3.php, reports.php, report1.r, report2.php, report3.php, general.r, questions.r and bivariate.r) which interact with each other. Some files as report1.r, report2.php and report3.php call some other subfiles to plot the graphical figures. Other files as general.r, questions.r and bivariate.r are utilized to build the graphical figures.

This procedure assumes that there is a MySQL database (event_db) which contains a table (quest) with the column variables: id, dstatistic, age, sex, location, degree, otherdegree, mdstatistic, q1, s1, q2, s2, q3, s3, q4, s4, q5, s5, day, hour and login. An example of this table is shown in PhpMyAdmin Interface in Figure 1.

	id	dstatistic	age	sex	location	degree	otherdegree	mdstatistic	q1	s1	q2	s2	q3	s3	q4	s4	q5	s5	day	hour	login
 	9	1	22	2	AdS	Finishing Graduation		no	9		8		8		9		8		2012-05-02	22:05:55	mwstat
 	10	1	29	2	AdS	Post Doctorate		yes	9		8		7		8		9		2012-05-02	23:05:17	mwstat
 	11	1	24	2	AdN	Post Doctorate		yes	5		4		3		2		2		2012-05-08	01:05:32	mwstat
 	12	2	40	1	AdS	Master degree		yes	3		2		2		2		2		2012-05-08	02:05:17	mwstat
 	13	2	40	1	AdS	Master degree		yes	3		2		2		2		2		2012-05-08	02:05:21	mwstat
 	14	2	40	1	AdS	Master degree		yes	3		2		2		2		2		2012-05-08	02:05:26	mwstat
 	15	2	40	1	AdS	Finishing Graduation		yes	3		2		2		2		2		2012-05-08	02:05:29	mwstat
 	16	1	24	2	AdN	Finishing Graduation		yes	5		4		3		2		2		2012-05-08	02:05:43	mwstat
 	17	1	34	2	AS	Finishing Graduation		yes	4		2		2		2		2		2012-05-16	16:05:08	mwstat

Figure 1. An example of quest table.

All the files are located in the same apache directory, for example, /var/www/html/, as in Ubuntu Linux. This interaction of these files is showed in Figure 2.

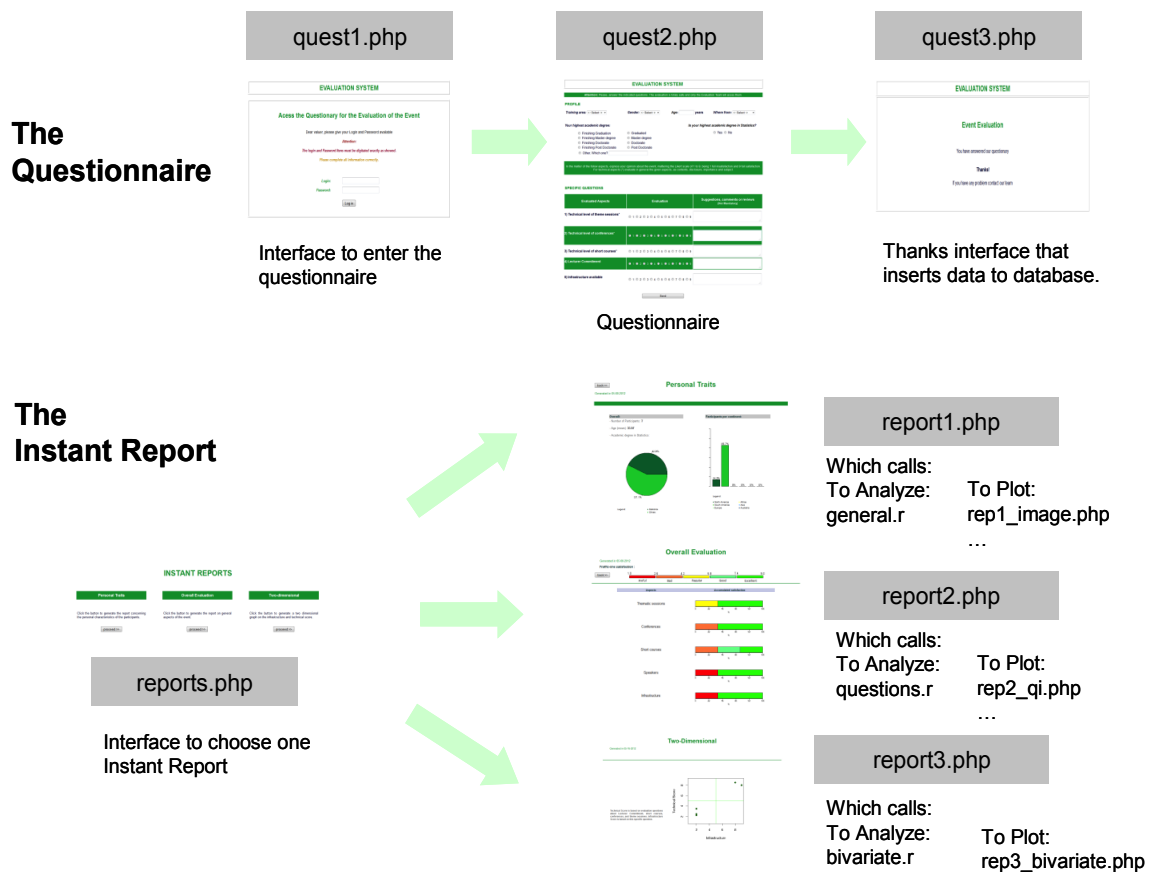

Figure 2. Files interaction

The codes of each file are exposed above and the syntax that calls each file is **red bolded**. Every R and PHP code should be kept as presented, because these languages are case sensitive. The HTML codes are just applied to pages design.

quest1.php

THE END OF THE STANDALONE REPLICATION OF EVENT EVALUATION - EXAMPLE 1.

STANDALONE REPLICATION OF PCA EXAMPLE

- EXAMPLE 3 -

In the same way as to Example 1, Linux server with Apache, R, PHP, and MySQL must be installed and this standalone syntax procedure assumes that there is a MySQL account with the following user data:

MYSQL	User: user
	Password: passuser

For this user, this standalone syntax procedure assumes there is a database with the following structure:

MYSQL	Database: article
-------	-------------------

In order to replicate the PCA analysis example there are 8 important files (pca_1.php, pca1_default.php, pca_2.php, pca_3.php, pca.r, biplot.php) which interact with each other. They are located in the same apache directory, for example, /var/www/html/, as in Ubuntu Linux. This interaction of these files is showed in Figure 1.

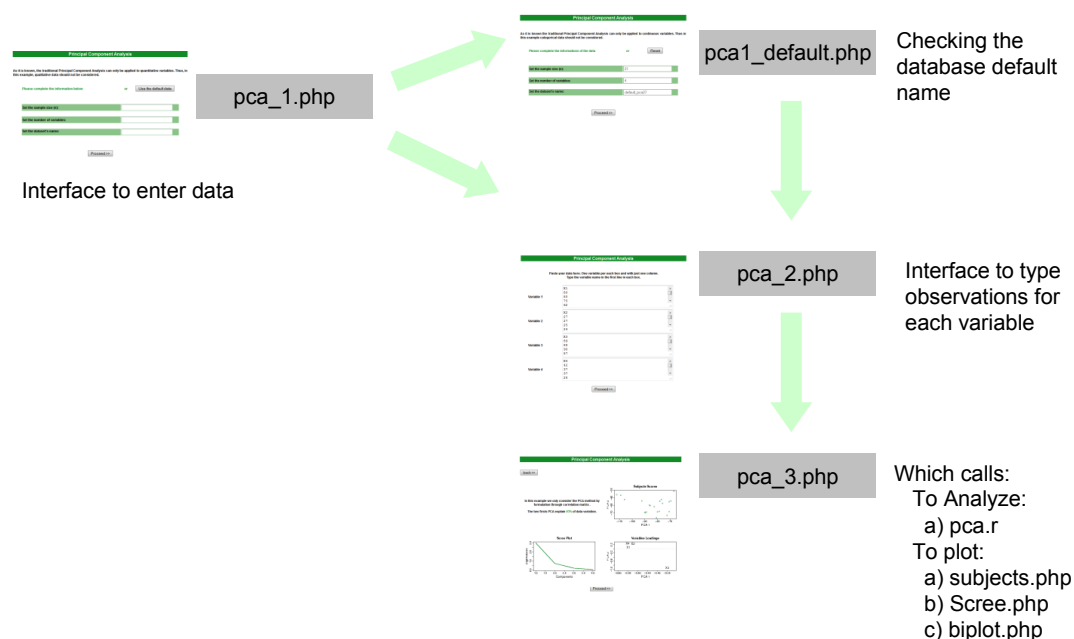

Figure 1. Files interaction

The codes of each file are exposed above and the syntax that calls each file is **red bolded**. Every R and PHP code should be kept as presented, because these languages are case sensitive. The HTML codes are just applied to pages design.

pca_1.php
